## COURSE STRUCTURE AND SYLLABUS

For

**Final Year Electrical Engineering / Electrical Engineering  
(Electronics and Power)/ Electrical & Electronics Engg / Electrical  
& Power Engineering**

**With effect from the Academic Year  
2023-2024**

**Dr. Babasaheb Ambedkar Technological University, Lonere.**

**B.Tech (Electrical Engineering / Electrical Engineering (Electronics and Power)/ Electrical & Electronics Engg / Electrical & Power Engineering)**

<b>Basic Sciences Courses(BSC)</b>		
BTBS101	Engineering Mathematics - I	(3-1-0)4
BTBS102	Engineering Physics	(3-1-0)4
BTBS107L	Engineering Physics Lab	(0-0-2)1
BTBS201	Engineering Mathematics - II	(3-1-0)4
BTBS202	Engineering Chemistry	(3-1-0)4
BTBS207L	Engineering Chemistry Lab	(0-0-2)1
BTBS301	Engineering Mathematics-III	(3-1-0)4
BTBS404	Analog and Digital Electronics	(3-0-0)3
BTBSL409	Analog and Digital Electronics Lab	(0-0-2)1

<b>Engineering Sciences Courses(BSC)</b>		
BTES103	Engineering Graphics	(2-0-0)2
BTES105	Energy and Environment Engineering	(2-0-0)2
BTES106	Basic Civil and Mechanical Engineering	(2-0-0)
BTES108L	Engineering Graphics Lab	(0-0-4)2
BTES203	Engineering Mechanics	(2-1-0)3
BTES204	Computer Programming	(3-0-0)3
BTES205	Workshop Practice	(0-0-4)2
BTES206	Basic Electrical and Electronics Engineering	(2-0-0)
BTES208L	Engineering Mechanics Lab	(0-0-2)1
BTES305	Engineering Material Science	(3-0-0)

<b>Humanities and Social Science Including Management Courses(HSSMC)</b>		
BTHM104	Communication Skills	(2-0-0)2

BTHM109L	Communication Skills Lab	(0-0-2)1
BTHM304	Basic Human Rights	Audit
BTHM506	Foreign Languages (A) Japanese Language (B) German Language	Audit
BTHM706	Engineering Operations and Project Management	Audit

<b>Professional Core Course (PCC)</b>		
BTEEC302	Electrical Machines-I	(3-1-0)4
BTEEC303	Electrical and Electronics Measurement	(3-1-0)4
BTEEL306	Electrical Machines Lab	(0-0-2)1
BTEEL307	Electrical and Electronics Measurement Lab	(0-0-2)1
BTEEC401	Network Theory	(3-1-0)4
BTEEC402	Power System	(3-1-0)4
BTEEC403	Electrical Machines-II	(3-1-0)4
BTEEL406	Network Theory Lab	(0-0-2)1
BTEEL407	Power System Lab	(0-0-2)1
BTEEL408	Electrical Machines-II Lab	(0-0-2)1
BTEEC501	Power System Analysis	(3-1-0)4
BTEEC502	Microprocessor and Microcontroller	(3-0-0)3
BTEEC503	Power Electronics	(3-1-0)4
BTEEL507	Power System Analysis Lab	(0-0-2)1
BTEEL508	Microprocessor and Microcontroller Lab	(0-0-2)1
BTEEL509	Power Electronics Lab	(0-0-2)1
BTEEC601	Switchgear Protection	(3-0-0)3
BTEEC602	Electrical Machine Design	(3-1-0)4
BTEEC603	Control System Engineering	(3-1-0)4

BTEEL606	Switchgear Protection Lab	(0-0-2)1
BTEEL607	Electrical Machine Design Lab	(0-0-2)1
BTEEL608	Control System Engineering Lab	(0-0-2)1
BTEEC701	High Voltage Engineering	(3-1-0)4
BTEEC702	Power System Operation and Control	(3-1-0)4
BTEEL707	High Voltage Engineering Lab	(0-0-2)1

<b>Professional Elective Course (PEC)</b>		
BTEEPE405	(A)Electromagnetic Field Theory	(3-0-0)3
	<b>(B)Signals and System</b>	
	©Advance Renewable Energy Sources	
	(D)Electronic Devices and Circuits	
BTEEPE504	(A)Industrial Automation	(3-0-0)3
	(B)Power Quality Issues	
	©HVDC	
BTEEPE604	<b>(A)Application of Power Electronics in Power System</b>	(3-0-0)3
	(B)Smart Grid Technology	
	©Modeling, Simulation and Control of Electric Drives	
BTEEPE703	(A)Energy Audit and Conservation	(3-0-0)3
	(B)Electrical System Design for Building	
	©Flexible AC Transmission System	
	(D)Electrical Utilization	

<b>Open Elective Course (OEC)</b>		
BTEEOE505	(A)Embedded System	(3-0-0)3
	(B)Electrical Safety	

	©Condition Monitoring of Electric Apparatus	
BTEEOE605	<b>(A)E-waste Management</b>	(3-0-0)3
	<b>(B)Power Plant Engineering</b>	
	©Sensor Technology	
	(D)Lightning Interaction with Power System	
BTEEOE704	(A)Process Control Instrumentation	(3-0-0)3
	(B)Biomedical Instrumentation	
	©Mechatronics	
BTEEOE705	(A)Testing, Maintenance and Commissioning of Electrical Equipment	(3-0-0)3
	(B)Electric and Hybrid Electric Vehicles	
	©Internet of Things (IoT)	

<b>Seminar / Mini Project / Internship</b>		
BTES209S	Seminar	(0-0-2)1
BTES211P	(Internship – I) Field Training / Internship/Industrial Training (minimum of 4 weeks which can be completed partially in first semester and second Semester or in at one time).	1
BTEEM308	Miniproject-I	(0-0-4)2
BTEEP410	(Internship – II)	1
BTEEM509	Miniproject-II	(0-0-2)1
BTEES609	Seminar	(0-0-4)2
BTEEP610	(Internship – III)	
BTEEM708	In house project-I / Mini project-III	(0-0-4)2

<b>Project(MP)</b>		
BTEEP802	In house project-I / Internship & Project in Industry	(0-0-26)13

**Dr. Babasaheb Ambedkar Technological University, Lonere.**

**B.Tech (Electrical Engineering / Electrical Engineering (Electronics and Power)/ Electrical & Electronics Engg / Electrical & Power Engineering)**

**Plan of Study:**

No.of Courses								
1	I	II	III	IV	V	VI	VII	VIII
2	BTBS101	BTBS201	BTBS301	BTEEC401	BTEEC501	BTEEC601	BTEEC701	BTEEPE801
3	BTBS102	BTBS202	BTEEC302	BTEEC402	BTEEC502	BTEEC602	BTEEC702	BTEEP802
4	BTES103	BTES203	BTEEC303	BTEEC403	BTEEC503	BTEEC603	BTEEPE703	
5	BTHM104	BTES204	BTHM304	BTBS404	BTEEPLE504	BTEEPE604	BTEEOE704

## Dr. Babasaheb Ambedkar Technological University, Lonere.

### **B.Tech (Electrical Engineering / Electrical Engineering (Electronics and Power)/ Electrical & Electronics Engg / Electrical & Power Engineering)**

#### **A. Program Educational Objectives (PEOs)**

Graduates will be able to–

- 1.To equip graduates with a strong foundation in engineering sciences and Electrical Engineering fundamentals to become effective collaborators, researchers and real-time problem solver with technical competencies.
- 2.Perceive the limitation and impact of engineering solutions in social, legal, environmental, economical and multidisciplinary contexts.
- 3.Excel in Industry/technical profession, higher studies, and entrepreneurship exhibiting global competitiveness.

#### **B. Program Outcomes (POs)**

Engineering Graduate will be able to –

1. **Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. **Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

**Dr. Babasaheb Ambedkar Technological University, Lonere.**

**B.Tech (Electrical Engineering / Electrical Engineering (Electronics and Power)/ Electrical & Electronics Engg / Electrical & Power Engineering)**

**Curriculum for Semester VII**

Course Category	Course Code	Course Title	Teaching Scheme			Evaluation Scheme				Credit

BSC= Basic Science Course, ESC= Engineering Science Course, PCC= Professional Core Course, PEC= Professional Elective Course, OEC= Open Elective Course, LC= Laboratory Course, HSSMC= Humanities and Social Science including Management Course

**Important Note: Minimum Eight Experiment to perform based on the syllabus for the laboratory subject.**

**Semester VII**

<b>BTEEPE703 Professional Elective (Group F)</b>	<b>BTEEOE704 Open Elective (Group G)</b>	<b>BTEEOE705 Open Elective (Group H)</b>
(A) Energy Audit and Conservation	(A) Process Control Instrumentation	(A) Testing, Maintenance and Commissioning of Electrical Equipment
(B) Electrical System Design for Building	(B) Biomedical Instrumentation	(B) Electric and Hybrid Electric Vehicles
(C) Applications of Power Electronics in Power System	(C) Mechatronics	(C) Internet of Things (IoT)
(D) Electrical Utilization		

### **Mapping of Courses with MOOCs Platform SWYAM / NPTEL**

S.N.	Course Name	Duration	Name of Professor	Institute offering Course
1	Power Management Integrated Circuits	12 Weeks	Prof. Qadeer Ahmad Khan	IITM
2	DC Power Transmission Systems	12 Weeks	Prof. Krishna S	IITM
3	High Power Multilevel Converters	12 Weeks	Prof. Anandarup Das	IITD
4	Fuzzy Sets, Logic and Systems & Applications	12 Weeks	Prof. Nishchal Kumar Verma	IITK
5	The Joy of Computing using Python	12 Weeks	Prof. Sudarshan Iyengar Prof. Yayati Gupta	IIT Ropar
6	Introduction to Industry 4.0 and Industrial Internet of Things	12 Weeks	Prof. Sudip Misra	IIT KGP
7	Entrepreneurship Essentials	12 Weeks	Prof. Manoj Kumar Mondal	IIT KGP

**BTEEC701 HIGH VOLTAGE ENGINEERING****04 credits****UNIT 1: Introduction to High Voltage Engineering****(02 hours)**

Electric Field Stresses, Poisson's equation, Estimation and Control of Electric Stress, Surge Voltages, their distribution and control.

**UNIT 2: Conduction & breakdown in gases****(06 hours)**

Gases as insulation media, ionization processes, Townsend's current growth equation, current growth in presence of secondary processes, Townsend's criterion for breakdown in electronegative gases, time lags for breakdown, Streamers theory, Paschen's law, breakdown in non-uniform fields and corona discharge, corona under positive & negative polarities, glow & arc discharge, considerations in using gases for insulation purpose.

**UNIT 3: Breakdown in Dielectric Materials****(08 hours)**

Conduction & breakdown in liquid dielectrics: Pure and commercial liquids, breakdown in pure and commercial liquids, theories of breakdown in liquids. Breakdown in solid dielectrics: Intrinsic, electromechanical & thermal breakdown, chemical, electrochemical deterioration, treeing, tracking, internal discharges, breakdown in composite insulation, properties of solid insulators & other materials used in practice. Insulating materials: In power transformers, rotating machines, circuit breakers, cables, power capacitors & other equipment.

**UNIT 4: Over voltage due to lightning phenomenon:****(08 hours)**

Natural causes for over voltages – Lightning phenomenon, Overvoltage due to switching surges, system faults and other abnormal conditions, propagation of lightning voltage & current waves on transmission lines, reflection & transmission of traveling wave at junction, system control of over voltage due to switching protection of transmission lines against over voltage. Insulation co-ordination, surge diverters, equipment insulation level & co-ordination of substations.

**UNIT 5: Generation & Measurement of high voltages & currents:****(10 hours)**

Generation of a) high d. c voltage b) power frequency high alternating voltage c) high frequency a. c. d) impulse voltages Standard impulse waves shapes and it's equation, multistage impulse generator, Marx circuit, generation of switching surges, tripping & control of impulse generators, generation of impulse currents.

Measurement of High Direct Current voltages, Abraham Voltmeter Measurement of High Voltages alternating and impulse, Measurement of High Currents-direct, alternating and Impulse, Oscilloscope for impulse voltage and current measurements

**UNIT 6: Non Destructive Testing****(06 hours)**

I. E. C. & IS codes for high voltage tests on electrical appliances & power apparatus & electrical motors, non- destructive testing, testing of insulators, bushings, isolators, circuit breakers, cables, transformers, surge diverter, layout of high voltage laboratories & test facilities.

**Reference Books:**

1. High Voltage Engineering: Fundamentals by E.Kuffel, W.S.Zaengl, J.Kuffel by Elsevier, 2nd Edition
2. High Voltage Insulation Engineering by Ravindra Arora, Wolfgang Mosch, New Age International (P) Limited, 1995.
3. High Voltage Engineering, Theory and Practice by Mazen Abdel Salam, Hussein Anis, Ahdan El-Morshedy, RoshdyRadwan, Marcel Dekker

**Text Books:**

1. Kamaraju V. & Naidu M. S., 'High Voltage Engineering', Tata-McGraw Hill
2. C. L. Wadhwa, "High Voltage Engineering", New Age International Pvt. Ltd

**Unit 1: Reactive Power Management****6 Hours**

Necessity of reactive power control, production and absorption of reactive power, methods of voltage control, shunt reactors, series capacitors, shunt capacitors, synchronous condensers, Static VAR Systems

**Unit 2: Power System Stability****6 Hours**

The stability problem-Steady state stability, transient stability and Dynamic stability, Swing equation. Equal area criterion of stability-Applications of Equal area criterion, Step by step solution of swing equation-Factors affecting transient stability, Methods to improve steady state and Transient stability

**Unit 3: Excitation Systems****6 Hours**

Excitation Systems: Excitation System requirements, Elements of an excitation system Types of excitation systems. Control and protective functions of Excitation systems

**Unit 4: Load Frequency Control****7 Hours**

Introduction, LFC control of a single-area system, Two-Area Load Frequency Control, Automatic voltage Control, Speed governing mechanism and modelling, Speed Governor Dead band and its effect on Automatic Generation Control

**Unit 5: Economic Operation of Power System****10 Hours**

Distribution of load between units within a plant, Economic division of load between units in a plant, transmission loss as function of plant generation, calculation of loss-coefficient, numerical Unit Commitment, Constraints on Economic operation of power system, optimum scheduling of hydro-thermal system, long term hydro scheduling in a hydro-thermal system, short term hydro-thermal scheduling, computer approach to solve the short-term hydro-thermal scheduling problem

**Text/References Books:**

1. P. Kundur, "Power System Stability and Control", McGraw-Hill, 1993.
2. I. J. Nagrath and D. P. Kothari, Modern Power System Analysis, TMH, 2003
3. A Chakrabarti and S. Halder, Power System Analysis: Operation and Control, PHI, 2006.
4. W. D. Stevenson, Elements of Power system analysis, Mcgraw Hill, Digitized on Dec., 2007.
5. C.L.Wadhwa, Electrical Power Systems, 3rd Edn, New Age International Publishing Co., 2001
6. T. K. Nagsarkar and M. S. Sukhija, Power System Analysis, Oxford University Press, 2007

**Unit 1: Sources of Energy and International Agreements****7 Hours**

Energy resources, Stored & running resources, Non-conventional energy sources, Necessity of conserving resources. United Nation Framework Convention on Climate Change. International Agreements – History and Current Agreements – Paris Agreement.

**UNIT 2 Energy In Industries****7 Hours**

Energy inputs in industry, Comparison of various energy inputs, Use of electric energy in industries for motive power, Heating (Space, Furnace, Water), Lighting, Air conditioning, Welding, Energy efficiency of the apparatus in above energy conversion processes, Energy efficient design of above processes.

**UNIT 3 Energy in Non-industrial Sector****7 Hours**

Different forms of energy used in agricultural, commercial, domestic & municipal sectors.

**UNIT 4 Energy Audit****7 Hours**

Audit, A prerequisite for energy conservation, Principles of energy audit, Measurement & measuring devices, Analysis of data, Audit Case Studies.

**UNIT 5 Energy Conservation in Utilities and Energy Investment****8 Hours**

Energy conservation in generation, transmission, distribution & utilization, Demand side energy management, Energy efficient lighting system, Energy efficient drives-Critical study & analysis of certain case studies.Planning, Implementation & monitoring of energy conservation project, Time Value of money, Financial Investment.All calculations and numerical interpretation.

**Texts/References Books:**

1. Charles M Gottschalk , “Industrial Energy Conservation” , John Willey and Sons
2. Keth & Fecher, “Energy Efficiency Handbook”, CRC Publication
3. Paul O Callagham,“Energy Management”, Tata Mc Grawhill
4. S Rao and B Parulekar ,“Energy Technology”, Khanna Publisher

**Unit 1 System planning****7 Hours**

Preparation of estimate of quantity of material required for wiring of a house (typical plan of house including electric layout is to be given). Drawing of electrical circuit for such electrification. Conductor size, calculations for internal domestic wiring, Permissible voltage drops for lighting and industrial load, Numerical, Conductor size calculation for underground cables: General considerations, Numerical, Basic design considerations.

**Unit 2: Study of different types of components in electrical distribution system****8 Hours**

Review of Insulated Wires: Types: Rubber covered taped and compounded or VIR, Lead alloy sheathed, Tough rubber sheathed, Weather proof, Flexible wire splicing, Termination (Twist splicing, Married joint, Tap joint, Pig tail joint) Different Types of Switches: Tumbler, flush, pull, grid, architrave, rotary snap, Push button, Iron clad water proof, Quick break knife switch. Ceiling roses, Mounting blocks, Socket outlets plugs, Main switches, Distribution fuse boards, MCB (Miniature Circuit Breakers)

**Unit 3 Cable size selection and Substation****7 Hours**

Load Details Calculation, Cable type and Construction features, Site Installation Conditions, Cable Selection Based on Current Rating of feeder, Introduction, Design consideration of Electrical installation. Introduction, Types of substation, Equipment and Accessories, Outdoor substation-pole mounting type and their SLD & estimation, Indoor substation- floor mounting type and their SLD & estimation.

**Unit 4 Protection****7 Hours**

Protection devices such as fuse, Earthing and requirements such as Soil Resistivity, Electrode, Types of earthing, Single phase and three phase installation for residential load, Busbar and Busbar chambers, Mounting of CTs and PTs.

Light Source: Incandescent lamp, Quartz lamps, Fluorescent lamps- General characteristics, Fluorescent lamps types, HID Lamps, Mercury vapour lamps, Metal halide lamps, high pressure sodium lamps, induction lamps.

**Unit 5 Electrical Planning****7 Hours**

Procedure in wiring planning, computer used in Electrical Design, the architecture-Electrical plan, Residential Electrical criteria.

**Texts/References Books:**

1. Electrical Wiring - Estimating & Costing By S.L. Uppal, Khanna Publishers.
2. Electrical Installation Estimating & Costing By J.B. Gupta, S.K. Kataria & Sons Publishers.
3. Electrical Design Estimating And Costing by K.B. Raina, S.K. Bhattacharya, New Age international LTD Publishers.
4. Residential, Commercial and Industrial Electrical Systems by Hemant Joshi, Tata Mcgraw-Hill Publishers.

**Reference:** Manual of Auto CAD.

## **BTEEC703APPLICATION OF POWER ELECTRONICS IN POWER SYSTEM 3 Credits**

### **Unit 1: Introduction**

**5 Hours**

Basics of Power Transmission Networks, Introduction to power electronics applications to power system: power generation, power transmission, power quality, active power filter.

### **Unit 2: Flexible AC transmission systems (FACTS)**

**9 Hours**

Basic realities & roles, Types of facts controller, Principles of series and shunt compensation  
Description of static var compensators (SVC), Thyristor Controlled series compensators (TCSC), Static phase shifters (SPS), Static condenser (STATCON), Static synchronous series compensator (SSSC) and Unified power flow controller (UPFC).

### **Unit 3: Modelling and Analysis of FACTS controllers**

**7 Hours**

Modelling and analysis of various FACTS controllers (SVC, TCSC, SPS, STATCON and UPFC), Control strategies to improve system stability. Power Quality problems in distribution systems.

### **Unit 4: Harmonics**

**7 Hours**

Generation of Harmonics, Harmonics creating loads, modelling, Series and parallel resonances, harmonic power flow, Mitigation of harmonics, active filters, and passive filters.

### **Unit 5: Active filters**

**7 Hours**

Shunt, series hybrid filters, voltage sags & swells, voltage flicker. Mitigation of power quality problems using power electronic conditioners. IEEE standards

Text/References Books:

1. R.M. Mathur and R. K. Varma, —Thyristor-Based FACTS Controllers for Electrical Power Systems, IEEE Press and John Wiley, 2002
2. Understanding of FACTs., Hingorani, N. G.; IEEE Press 1996.

4. Static Reactive Power Compensation.; Miller T.J.E.; John Wiley & Sons, New York, 1982
5. Flexible AC Transmission System. (FACTs).; Yong Hua Song.; IEE 1999
6. Recent Publications on IEEE Journals

**BTEEC703D ELECTRICAL UTILIZATION****3 Credits****Unit 1: Electrical Heating****7 Hours**

Advantages of electrical heating, Resistance heating, Design of heating element in resistance oven, Control of temperature in resistance oven, Electric arc furnaces, Induction furnaces, Dielectric heating. Electric Welding: Electric arc welding & Resistance welding, Modern welding techniques like Ultrasonic & Laser welding.

**Unit 2: Electrolytic Processes****6 Hours**

Faradays laws of electrolysis, Application of electrolysis, Like Electroplating, Anodizing electrical polishing & electroextraction, Accumulators & cell, Types & construction, Charging & discharging, recent trends in manufacturing of batteries.

**Unit 3: Illumination****7 Hours**

Requirement of good lighting, Classification of light fitting & luminaries, Factor to be considered for design of indoor & outdoor lighting scheme, Design procedure for factory lighting, flood lighting & street lighting. Design of illumination scheme-Factors to be considered for design of illumination scheme, Calculation of illumination at different points, considerations involved in simple design problems for indoor installation, illumination schemes, standard illumination level.

**Unit 4: Electric Traction System:****8 Hours**

Electrical transmission: Electrical transmission system employing D.C. generator D.C. series motor, Electrical transmission system employing 3 phase alternator supplying D.C. traction motors, electrical transmission employing 3 phase alternator supplying induction motors, Choice of traction system-battery drive, hybrid drive, flywheel drive, tramways, trolley bus. Traction Motors: Characteristics of traction motors, straight D.C. series motor, suitability of series motor for traction duty, constructional details of D.C. Traction Motors.

**Unit 5: Train Movement and Braking:****7 Hours**

Speed time curve, its analysis and construction, schedule speed and factors affecting it, train resistance and its components. Tractive effort calculations, average acceleration and speed, energy output and consumption.

**Braking:** Mechanical versus electric braking, rheostatic braking, Regenerative braking, method and energy saved in the process, Magnetic track brakes.

- 6) Electrical Wiring - Estimating & Costing By S.L. Uppal, Khanna Publishers.

**BTEEOE704A PROCESS CONTROL INSTRUMENTATION****3 Credits****Unit 1: Introduction to Process Control****7 Hours**

Mathematical Modeling, Development of mathematical models. Modeling considerations for control purposes

**Unit 2: Dynamic Behavior of Chemical Processes****7 Hours**

Computer simulation and the linearization of nonlinear systems, Brief of Laplace transforms, Transfer functions and the input-output models, Dynamics and analysis of first, second and higher order systems.

**Unit 3: Feedback Control Schemes****7 Hours**

Concept of feedback control, Dynamics and analysis of feedback-controlled processes, Stability analysis, Controller design, Frequency response analysis and its applications

**Unit 4: Advanced Control Schemes****7 Hours**

Feedback control of systems with dead time or inverse response, Control systems with multiple loops, Feed forward and ratio control.

**Unit 5: Instrumentation****7 Hours**

Final control elements, measuring devices for flow, temperature, pressure and level Mathematical modeling: Development of mathematical models, modeling consideration for control purpose.

**Text /Reference Book:**

1. Stephanopoulos, G. (1984). "Chemical process control: an introduction to theory and practice," Prentice-Hall, New Delhi.
2. Seborg, D.E., Edgar, T.F. and Mellichamp, D.A. (2003). "Process dynamics and control," Wiley, New York.
3. Smith, C.A. and Corripio, A.B. (1997). "Principles and practice of automatic process control," Wiley, New York.
4. Johnson, C.D. (2006). "Process control instrumentation technology," Prentice-Hall, New Delhi.

**Unit 1: Fundamentals of Biomedical Engineering** **7 Hours**

Cell and its structure – Resting and Action Potential – Nervous system and its fundamentals - Basic components of a biomedical system- Cardiovascular systems- Respiratory systems -Kidney and blood flow – Biomechanics of bone - Biomechanics of soft tissues - Basic mechanics of spinal column and limbs -Physiological signals and transducers - Transducers – selection criteria – Piezo electric, ultrasonic transducers - Temperature measurements - Fiber optic temperature sensors.

**Unit 2: Non-Electrical Parameters Measurement and Diagnostic Procedures** **7 Hours**

Measurement of blood pressure - Cardiac output - Heart rate - Heart sound - Pulmonary function measurements – spirometer – Photo Plethysmography, Body Plethysmography – Blood Gas analysers, pH of blood –measurement of blood pCO<sub>2</sub>, pO<sub>2</sub>, finger-tip oxymeter - ESR, GSR measurements.

**Unit 3: Electrical Parameters Acquisition and Analysis** **7 Hours**

Electrodes – Limb electrodes –floating electrodes – Pregelled disposable electrodes - Micro, needle and surface electrodes – Amplifiers, Preamplifiers, differential amplifiers, chopper amplifiers – Isolation amplifier - ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms - Electrical safety in medical environment, shock hazards – leakage current-Instruments for checking safety parameters of biomedical equipment's.

**Unit 4: Imaging Modalities and Analysis** **7 Hours**

Radio graphic and fluoroscopic techniques – Computer tomography – MRI – Ultrasonography – Endoscopy – Thermography –Different types of biotelemetry systems - Retinal Imaging - Imaging application in Biometric systems - Analysis of digital images.

**Unit 5: Life Assisting, Therapeutic and Robotic Devices** **7 Hours**

Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart – Lung machine – Audio meters – Dialysers – Lithotripsy - ICCU patient monitoring system: Nano Robots - Robotic surgery – Advanced 3D surgical techniques- Orthopedic prostheses fixation.

**Text /Reference Books:**

1. Biomedical Instrumentation by R. S. Khandpur, Tata McGraw Hill.
2. Introduction to Biomedical Technology by J. J. Karr & J. M. Brown, Pearson Publication.
3. Medical Instrumentation Application and Design by J. G. Webster, Wiley Publication.

**Unit 1: Introduction to Mechatronics and its Systems****4 Hours**

Evolution, Scope, Measurement Systems, Control Systems, Open and Close Loop Systems, Sequential Controllers, Microprocessor based Controllers, Mechatronics approach.

**Unit 2: Sensors and Transducers****8 Hours**

Introduction to Sensors and measurement systems, Displacement and Position Sensors, Proximity Sensors (Capacitive and Inductive Sensor), Ultrasonic Sensors, Temperature and Light Sensors, Velocity and Motion Sensors, Force and Pressure Sensors, Level and Flow Sensors, Magnetic Sensors (Reed Switch), pH Sensor, Humidity Sensors, Selection of Sensors, Signal Conditioning Devices.

**Unit 3: Mechanical Actuation Systems****8 Hours**

Mechanical systems, Types of motion, Kinematics Chains, Cams, Gear Trains, Ratchet and Pawl, Belt and Chain drives, Bearings, Mechanical aspects of motor selection.

Pneumatic and Hydraulic Actuation Systems: Actuation systems, Pneumatic and Hydraulic systems, Components and Symbols, Directional Control Valves, Pressure Control Valves, Cylinders, Rotary Actuators, Application.

**Unit 4: Microprocessors****7 Hours**

Digital logic: Basics of Digital Technology Number System, Boolean algebra, Logic Functions, Karnaugh Maps, Timing Diagrams, Flip-Flops. Microprocessors: Introduction, Architecture, Pin Configuration, Instruction set, Programming of Microprocessors using 8085 instructions, Interfacing input and output devices-Interfacing D/A converters and A/D converters, Applications, Temperature control, Stepper motor control, Traffic light controller.

**Unit 5: Programmable Logic Controller****8 Hours**

Introduction, Basic structure, Input/ Output Processing, Programming, Mnemonics, Timers, Internal relays and counters, Data handling, Analog and Digital Input/Output, Selection of a PLC, Applications.

**Robotics:** Introduction, Types of Robots, Robotic Control, Robot Drive Systems Robot End Effectors, Selection Parameters of a Robot, Applications.

**Unit 1: Maintenance and Condition Monitoring**

**7 Hours**

Importance and necessity of maintenance, different maintenance strategies like Breakdown maintenance, planned maintenance and condition based maintenance. Planned and preventive maintenance of transformer, induction motor and alternators. Insulation stressing factors, insulation deterioration, polarization index, dielectric absorption ratio. Concept of condition monitoring of electrical equipments. Advanced tools and techniques of condition monitoring (Only theory)

**Unit 2: Condition Monitoring of Transformers**

**7 Hours**

Testing and condition monitoring of oil as per the IS/IEC standards. Filtration/reconditioning of insulating oil. Failure modes of transformer. Condition monitoring of transformer bushings, On load tap changer, dissolved gas analysis, degree of polymerization. IS/Specifications for testing of transformer bushing and oil.

**Unit 3: Condition Monitoring of Induction Motors**

**7 Hours**

Parameters of induction motors, Induction motor fault diagnostic methods, the induction motor fault monitoring method and Remedies

**Unit 4: Testing of Electrical Equipments**

**7 Hours**

Testing of Power cables – Causes of cable failure, fault location methods and Remedial actions, Testing of Transformer - Type tests, Routine tests and Special tests. Various abnormal conditions, trouble shooting, faults, causes and remedies, Testing of Induction motor – Various abnormal conditions, trouble shooting, faults, causes and remedies, Testing of Capacitor banks

**Unit 5: Special Tests for Faults Finding and Earthing**

**7 Hours**

Industrial Sonography (ultra sonic tests) to detect internal mechanical faults, Industrial X ray /Radiography, Megger, Heat Run Test, High voltage withstand Tests.

Substation earthing system i) Types of earthing (Equipment and Neutral), Maintenance free earthing system. ii) Different electrode configuration (Plate and Pipe Electrode) iii) Tolerable step and Touch Voltages. Methods of testing earth resistance.

**Unit 1: Introduction to Hybrid Electric Vehicles****7 Hours**

History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, and mathematical models to describe vehicle performance.

**Unit 2: Hybrid Electric Drive-trains****7 Hours**

Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis. Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.

**Unit 3: Electric Propulsion unit****7 Hours**

Introduction to electric components used in hybrid and electric vehicles, Configuration and control of-DC Motor drives, Induction Motor drives, Permanent Magnet Motor drives, Switch Reluctance Motor drives, drive system efficiency. Power converters in EV.

**Unit 4: Energy Storage****7 Hours**

Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor and Flywheel used for energy storage, Hybridization of different energy storage devices

**Unit 5: Sizing the drive system****7 Hours**

Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology Communications, supporting subsystems: In vehicle networks- CAN, Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies

3. Mehrdad Ehsani, Yimi Gao, Sebastian E. Gay, Ali Emadi, "Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design",

**Unit 1: Internet in general and internet of things****7 Hours**

Layers, protocols, packets, services, performance parameters of a packet network as well as applications such as web, Peer-to-peer, sensor networks, and multimedia

**Unit 2: Transport services****7 Hours**

TCP, UDP, socket programming, Network layer: forwarding & routing algorithms (Link, DV), IP-addresses, DNS, NAT, and routers

**Unit 3: Local area network****7 Hours**

MAC level, link protocols such as: point-to-point protocols, Ethernet, WiFi 802.11, cellular Internet access, and Machine-to-machine. Mobile networking: Roaming and handoffs, mobile IP, and ad hoc and infrastructure less networks.

**Unit 4: Real time networking****7 Hours**

Soft and real time, quality of service/information, resource reservation and scheduling, and performance measurements

**Unit 5: IOT definitions****7 Hours**

Overview, applications, potential & challenges, and architecture, IoT examples; case studies e.g sensor body area network and control of smart home

**Text Books/Reference Books:**

1. Kurose, James F.; Ross, Keith W. Computer networking: a top-down approach, 5th ed., international ed.:Boston, Mass.:Pearson,cop.2010

**Unit 1: Operations Planning Concepts**

**7 Hours**

Introduction, Operations Functions in Organizations, Historical development, Framework for managing operations, The trend: Information and Non-manufacturing systems, Operations management, Factors affecting productivity, International dimensions of productivity, The environment of operations, Production systems decisions- a look ahead.

**Unit 2: Operations Decision Making**

**7 Hours**

Introduction, Management as a science, Characteristics of decisions, Framework for decision making, Decision methodology. (Problems on decision trees)

**Unit 3: System Design and Capacity**

**7 Hours**

Introduction, Manufacturing and service systems, Design and systems capacity, Capacity planning. Forecasting Demand: Forecasting objectives and uses, forecasting variables, Opinion and Judgmental methods, Time series methods, Moving Average methods, Exponential smoothing, Trend adjusted Exponential Smoothing, Regression and correlation methods, Application and control of forecasts-Mean Absolute Deviation, BIAS, and Tracking Signal.

**Unit 4: Aggregate Planning and Master Scheduling**

**7 Hours**

Introduction- planning and scheduling, Objectives of aggregate planning, Three Pure Strategies, Aggregate planning methods, Master scheduling objectives, Master scheduling methods. Material and Capacity Requirements Planning: Overview: MRP and CRP, MRP: Underlying concepts, System parameters, MRP logic, System refinements, Capacity management, and CRP activities.

**Unit 5: Scheduling and Controlling Production Activities**

**7 Hours**

Introduction, PAC, Objectives and Data requirements, Loading –Finite and Infinite Scheduling methodology, priority sequencing, capacity control. Single Machine Scheduling: Concept, measures of performance, SPT rule, Weighted SPT rule, EDD rule. Flow –Shop Scheduling: Introduction, Johnson's rule for 'n' jobs on 2 and 3 machines, CDS heuristic. Job-Shop Scheduling: Types of schedules, Heuristic procedure, scheduling 2 jobs on 'm' machines.

Lean Systems: Seven Wastes in Lean, Characteristics of Just-in-Time operations, Pull method of materials flow, consistently high quality, small lot sizes, Uniform workstation loads, Standardized components and work methods, close supplier Ties, Flexible workforce, Line flows, Automated production, preventive maintenance, continuous improvement, The Kanban system, General operating rules, Determining the number of containers, Other Kanban Signals, JIT II, Lean Systems in Services, Strategic Implications of Lean systems, Competitive Priorities, Flows, Operational Benefits Implementation Issues, Organizational Consideration, Process considerations, Inventory and scheduling, Lean system across the organization.

**List of Experiments: Perform minimum eight experiments from given list**

- 1) Study of Faraday Cage for HV labs.
- 2) Study of Standard HV Laboratory layouts.
- 3) One min. (1-min.) DC high voltage withstand test on Equipment. (Max. up to 10 KV).
- 4) Effect of gap length on liquid insulating material.
- 5) Breakdown Strength of composite dielectric material.
- 6) Study of impulse generator.
- 7) High voltage withstand test on cables/safety gloves/shoes, as per IS. (Max. 2.25 KV DC)
- 8) Horn gap arrangement as surge diverter.
- 9) Measurement audible and visible corona inception and extinction voltage.
- 10) Development of tracks and trees on polymeric insulation.
- 11) Study of Effect of EHV field on Human, Animals & Plants.

**Inhouse Project Part-I**

It is the phase –I of in house project, for the students those are not doing Internship in the Industry, such students can do project work in the dept. It is expected that students should finalize objective of the work, tools and techniques, and literature survey of the work. Assessment will be based on the work carried out by the student, report submitted and presentation.

**Miniproject-III**

Student, who wanted to opt for internship in industry in VIII semester, should do the miniproject, preferably based on hardware. Assessment will be based on the work carried out by the student, report submitted and presentation.

**BTEEP802 INHOUSE PROJECT PART-II /INTERNSHIP IN INDUSTRY****In House Project Part-II**

In phase-II of In-house project, work should consist of detailed report for chosen topic and output of work proposed in VIIth semester, in addition to the contents specified in semester VII. Assessment will be based on the work carried out by the student, report submitted and presentation.

**Internship in Industry**

In this course, students should go to industry for internship for one semester and do assigned work. After completion of the Internship student should submit the report to the department. Assessment will be based on the work carried out by the student, report submitted and presentation, in consultation with the Industry guide.
